Obrazovanje i stručna literatura

Ponuda

eUniversity

We offer a solution for universities. eUniversity is a software platform that provides support for e-learning and higher education. E-learning as a concept implies computerization of all aspects and procedures relevant to the learning process itself. This primarily implies the support to all educational and business processes that occur in the educational institution, all in order to provide relevant information and learning resources for students.

Basic components or eUniversity modules provide support for management, student services, teaching staff and students. University business processes can be fully supported by this software solution and thus achieve better efficiency in the process of providing services to students. Students should be in the center of the educational process and therefore it is necessary to constantly strive for improvement of the teaching process.
