Opis

We produce innovative aluminum window profiles with thermal breaks made of ALUMINUM - WOOD combination. Our products are innovative compared to other profiles available on the market, and have features such as: - hidden casements that do not have an outer face and lie snugly against the glazing, - casements that do not have a glass holder inside the profile. Our products maximize the good side of each of the materials: • WOOD - insulator and aesthetic appearance in the interior • ALUMINUM - high carrying capacity with excellent fixture performance • PVC and POLYAMIDES - excellent insulators (thermal breaks)
